Introduction

Definitions of Trust

- Trust a prediction sufficiently to take action based on it.
- **Trust a model** to behave in reasonable ways if deployed.

Solutions

Providing explanations (LIME) for individual predictions

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Selecting multiple such predictions (SP-LIME)

1. Introduction

- 2. Goals for Explainer
- 3. LIME (Local Interpretable Model-agnostic Explanations)

▲□▶ ▲□▶ ▲ □▶ ▲ □▶ □ のへぐ

- 4. SP (Submodular Pick) LIME
- 5. Simulation

Goals for Explainer

Interpretable

Provide qualitative understanding between the input and the response and easy to understand.

Local fidelity

How the model behaves in the vicinity of the instance being predicted.

Model-agnostic

Explain any model i.e. Treat the original model as a black box.

Global perspective

Select a few explanations to ascertain trust in the model.

- 1. Introduction
- 2. Goals for Explainer
- 3. LIME (Local Interpretable Model-agnostic Explanations)

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三 のへぐ

Let the model being explained
f: R^d → R, f(x) = Pr(Y = k|X = x)

Define an explanation as a model g ∈ G, g : {0,1}^{d'} → R
 G = Class of intepretable models
 z ∈ {0,1}^{d'}: binary vector for interpretable representation.
 ex) the presence of a word or a super-pixel

 π_x(z) = proximity measure between an instance z to x
 ex) π_x(z) = exp(−D(x, z)²/σ²)

▲□▶ ▲□▶ ▲ □▶ ▲ □▶ □ のへぐ

 $\cdot \Omega(g) =$ measure of complexity

Blue/Pink = The black box model's complex decision function fThe bold red cross = the instance being explainedThe dashed line = the learned explanation that is locally faithful

Algorithm 1 Sparse Linear Explanations using LIME

Require: Classifier f, Number of samples N **Require:** Instance x, and its interpretable version x' **Require:** Similarity kernel π_x , Length of explanation K $Z \leftarrow \{\}$ for $i \in \{1, 2, 3, ..., N\}$ do $z'_i \leftarrow sample_around(x')$ $Z \leftarrow Z \cup \langle z_i, f(z_i), \pi_x(z_i) \rangle$ end for $\omega \leftarrow K-Lasso(Z,K) \triangleright$ with z_i as features, f(z) as target return ω

- 4. SP (Submodular Pick) LIME
- 5. Simulation

SP (Submodular Pick) LIME

- LIME is not sufficient to evaluate and assess trust in the model as a whole.
- Give a global understanding of the model by explaining a set of individual instances.
- **B** = budget, the number of explanations
- pick step = the task of selecting B instances for the user to inspect.

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

 \cdot pick a diverse, representative set of explanations

SP (Submodular Pick) LIME

Rows = instancescolumns = features

SP (Submodular Pick) LIME

Algorithm 2 Submodular pick (SP) algorithm

Require: Instances X, Budget B for all $x_i \in X$ do $W_i \leftarrow explain(x_i, x'_i)$ \triangleright Using Algorithm 1 end for for $j \in \{1, ..., d'\}$ do $I_i \leftarrow \sqrt{\sum_{i=1}^n |W_{ii}|}$ Compute feature importances end for $V \leftarrow \{\}$ while |V| < B do $V \leftarrow V \cup \operatorname{argmax}_i c(V \cup \{i\}, W, I)$ end while return V

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のQで

$$c(V,W,I) = \sum_{j=1}^{d'} \mathbb{1}_{[\exists i \in V: W_{ij} > 0]} I_j$$

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三 のへぐ

- 4. SP (Submodular Pick) LIME
- 5. Simulation

- Use two sentiment analysis datasets (books and DVDs).
- classify product reviews as positive or negative.
- Experiment Setup
 - \cdot method = LIME, parzen, greedy, random procedure

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

- \cdot K=10
- \cdot train=1600, test=400

Figure 6: Recall on truly important features for two interpretable classifiers on the books dataset.

Figure 7: Recall on truly important features for two interpretable classifiers on the DVDs dataset.

◆□▶ ◆□▶ ◆三▶ ◆三▶ ●□ ● ●

Table 1: Average F1 of *trustworthiness* for different explainers on a collection of classifiers and datasets.

	Books				DVDs			
	LR	NN	RF	SVM	LR	NN	RF	SVM
Random	14.6	14.8	14.7	14.7	14.2	14.3	14.5	14.4
Parzen	84.0	87.6	94.3	92.3	87.0	81.7	94.2	87.3
Greedy	53.7	47.4	45.0	53.3	52.4	58.1	46.6	55.1
LIME	96.6	94.5	96.2	96.7	96.6	91.8	96.1	95.6

 untrustworthy = the prediction changes when untrustworthy features are removed.

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

trustworthy = otherwise.

Figure 8: Choosing between two classifiers, as the number of instances shown to a simulated user is varied. Averages and standard errors from 800 runs.

The End
