Document Modeling with Gated Recurrent Neural Network for Sentiment Classification Proceedings of the 2015 conference on empirical methods in natural language processing

Duyu Tang, Bing Qin, Ting Liu

Harbin Institue of Technology, Harbin, China

2015

Introduction

- · Infant attempt combines neural networks to sentimental analysis
- Document level sentiment classification rating 1-5 or 1-10
- bottom-up fashion algorithm
 - Learns sentence representation w/ CNN or LSTM
 - Sementics of sentences and their relatios are adaptively encoded with GRU
- Achieve state-of-the-arts results for IMDB and Yelp datasets.

Overview

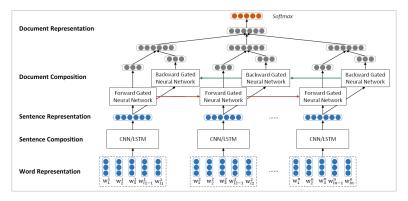

Figure: Fig. 1 of thesis

・ロト < 目 > < 目 > < 目 > < 目 > < 0 < 0
</p>

Sentence Composition

- Sentence embedding from word embedding
 - Word embedding: word2vec
- CNN and LSTM method

CNN Sentence Composition

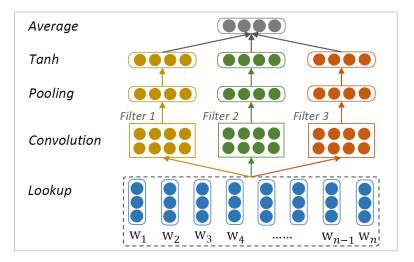

Figure: Fig. 2 of thesis. Filter: n-gram

Document composition

- Simple averaging sentence vector fails to capture complex linguistic relations(e.g. "cause" and "contrast")
- Standard RNN suffers from gradient vanishing / exploding
- GatedRNN, Average, Bidirectional

Attention-based LSTM for Aspect-level Sentiment Classification Proceedings of the 2016 conference on empirical methods in natural language processing

Yequan Wang, Minlie Huang, and Li Zhao* and Xiaoyan Zhu

State Key Laboratory on Intelligent Technology and Systems Tsinghua National Laboratory for Information Science and Technology Department of Computer Science and Technology, Tsinghua University, China *Microsoft Research Asia

2016

Introduction

- Aspect-level Sentimental classification: One review has various (sometimes opposite) views for different aspects.
 ex) "The appetizers are ok, but the service is slow" Suggest aspect embedding vector for the first time
- Attention mechanism: The model concentrate on different parts of a sentence when different aspects are taken as input.
- LSTM-based sentence analysis
- Experiments

Model

LSTM

• N: length of sentence. $h_i \in \mathbb{R}^d$: hidden, w: word embedding.

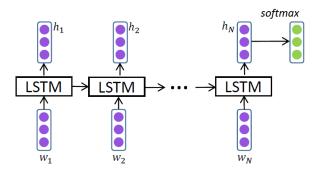

Figure: Fig 1 of thesis

< ロ > < 同 > < 三 > < 三 > < 三 > < ○ < ○ </p>

Attension-based LSTM

- $v_{a_i} \in \mathbb{R}^{d_a}$: embedding of aspect *i*, d_a : dim. of aspect embedding. $A = (v'_{a_1}, \cdots, v'_{a_{|A|}}) \in \mathbb{R}^{d_a \times |A|}$: matrix of all aspect embedding. $H \in \mathbb{R}^{d \times N} = [h'_1, \cdots, h'_N]$ $e_N \in \mathbb{R}^N = (1, 1, \cdots, 1)'$
- Attension mechanism: from h_1 to h_N , where should we focus on? (α)

$$M = tanh\left(\begin{bmatrix} W_h H \\ W_v v_a \otimes e_N \end{bmatrix}\right)$$
$$\alpha = softmax(w^\top M)$$
$$r = H\alpha^\top$$

• Final sentence representation: linear combination of r and h_N (not r only)

$$h* = tanh(W_{P}r + W_{x}h_{N})$$

output probability

$$y = softmax((W_sh * + b_s))$$

Model

<ロト

AT-LSTM

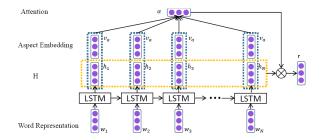

Figure: Fig 2 of thesis. How to achieve r in AT-LSTM alg.

Attension-based LSTM with Aspect Embedding

- In AT-LSTM, v_a only is only used for computing attention weight α .
- By adding v_a as input of LSTM, h can have information of aspects.

ATAE-LSTM

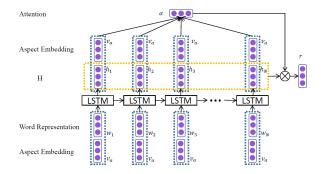

Figure: Fig 3 of thesis. How to achieve r in ATAE-LSTM alg.

<ロト < 目 > < 目 > < 目 > < 目 > < 目 > < 0 < 0</p>

Qualitative analysis

- Visualize α
- Attend proper words for aspects

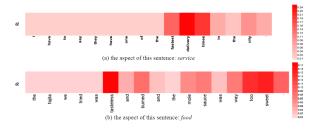

Figure: Fig 4 of thesis.

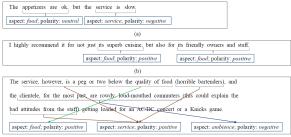

イロト 不得 トイヨト イヨト

3

◆□▶ ◆□▶ ◆□▶ ◆□▶ = ● のへ⊙

Case Study

- Sentence with different aspects
- Keypoints are distributed and interpret the word 'not' correctly
- Long and complicated sentences
